Academic Information *System Design*

ROLE
Designer & Developer

STACK
Laravel, MySQL

TIMELINE
8 Weeks

A calm, structured digital environment for managing students, lecturers, courses, and academic schedules — designed to make complex data feel effortless.

01 — THE CHALLENGE

Academic data was scattered across spreadsheets and manual records. Staff needed one reliable source of truth that was fast, secure, and easy to learn.

02 — THE APPROACH

I mapped the core workflows, designed a clear visual hierarchy, and built a role-based application with focused CRUD flows and a responsive interface.

03 — OUTCOME

- Centralised academic records.
- Faster scheduling and data entry.
- Consistent interface across devices.

04 — REFLECTION

Good systems are quiet. The most successful parts of this project were the ones users never had to think about — predictable navigation, clear feedback, and dependable data.
